Proposed Additions & Modules

1. User & Role Management

Roles & Permissions (Critical)

Right now, you define modules but not who can do what.

Example:

Role	View	Create	Edit	Delete	Approve
Family	✅	Limited	Limited	❌	Care Plan & Quote
Patient	Limited	❌	❌	❌	❌
Care Coordinator	✅	✅	✅	Limited	✅
Doctor	Assigned Patients	Clinical	Clinical	❌	Clinical Review
Nurse	Assigned	Clinical Notes	Clinical Notes	❌	❌
Support Worker	Assigned Tasks	Shift Notes	Shift Notes	❌	❌
Receptionist	Scheduling	Booking	Booking	❌	❌
Clinic Admin	All	All	All	Limited	Operational
Super Admin	Full	Full	Full	Full	Full

This should be mandatory.

---

2. Core System Engines

Telehealth Engine

Telehealth Flow

Appointment

↓

Reminder

↓

Waiting Room

↓

Device Check

↓

Join Meeting

↓

Video Consultation

↓

File Sharing

↓

Clinical Notes

↓

Prescription (future)

↓

Session Complete

↓

Stored in Care Episode

Rules:

- Browser and mobile support.
- Waiting room.
- Camera/microphone test.
- Chat.
- Screen sharing (future-ready).
- File upload during consultation.
- Automatic session log.
- Network quality log.
- Digital consent before joining.

Communication Engine

Include:

Family ↔ Coordinator

Family ↔ Clinic

Coordinator ↔ Doctor

Coordinator ↔ Allied Health

Internal Staff Chat

Announcements

Read receipts

Attachments

Pinned messages

Conversation linked to Care Episode

Notification Engine

Specify:

Push Notifications

Email

SMS

In-app

Events:

Appointment booked

Reminder

Assessment due

Report uploaded

Plan approved

Task overdue

Telehealth reminder

Review due

Invoice generated

---

4. Dashboards & Interface

Dashboard Requirements

Every role should have a dedicated dashboard.

For example:

Family Dashboard

Upcoming appointments

Current Care Plan

Goals

Achievements

Invoices

Messages

Book Consultation

Join Telehealth

Notifications

Emergency Contact

Coordinator Dashboard

Assigned Patients

Today's appointments

Pending assessments

Pending approvals

High-risk patients

Overdue documentation

Unavailable staff

Task completion %

Doctor Dashboard

Today's patients

Assessments

Telehealth queue

Reports awaiting review

---

3. Patient Care & Operational Workflows

Patient Timeline

Example:

Registration

↓

Consultation

↓

Assessment

↓

Report

↓

Care Plan

↓

Appointment

↓

Telehealth

↓

Goal achieved

↓

Review

↓

Episode Closed

No manual updates.

Incident Management

Healthcare systems require this.

Examples:

Falls

Medication incidents

Complaints

Safeguarding concerns

Missed visits

Clinical escalation

Near misses

Each linked to:

- Patient
- Episode
- Staff
- Location
- Resolution

Search Engine

Global search.

Search:

Patient

Family

Episode

Appointment

Report

Goal

Invoice

Employee

Message

Reporting Engine

Operational:

Staff utilization

Patient growth

Revenue

Bookings

Telehealth usage

Task completion

Clinical:

Goal achievement

Care outcomes

Assessment completion

Review compliance

Configuration Engine

Avoid hardcoding.

Administrators should configure:

Services

Prices

Departments

Goals

Assessment templates

Notification templates

Branches

Roles

Permissions

Employee Management

This deserves its own module.

Each employee:

Employee ID

Profession

Qualifications

Licences

Languages

Employment type

Roster

Leave

Branch

Department

Supervisor

Status

Performance

Audit Engine

Expand beyond logs.

Audit:

Login

Logout

Task Rules

Your Task Engine is good, but I'd make the rules explicit.

Every task must have:

- Task ID
- Care Episode ID
- Care Plan ID
- Goal ID (if applicable)
- Service ID (if applicable)
- Assigned employee
- Priority
- Due date
- Estimated duration
- Actual duration
- Status
- Completion evidence
- Notes
- Audit trail

Rules

- Tasks can be generated automatically or manually.
- Every recurring service automatically creates recurring tasks.
- Completing a task updates the related appointment and service progress.
- A completed task cannot be edited directly. Corrections require an amendment or supervisor action.
- Missed tasks trigger alerts to the coordinator.
- Overdue critical tasks are escalated automatically.

Non-Functional Requirements

This is essential.

Include targets such as:

- API response time: <500 ms for normal requests.
- Support at least 10,000 concurrent users (or another agreed capacity).
- 99.9% uptime target.
- Daily automated backups.
- Disaster recovery plan.
- Encryption in transit and at rest.
- Full audit logging.
- Role-based access control.
- Regional data residency support.
- Scalable architecture for additional clinics and countries.
